Assignment: Project 2 Pseudocode, e.g., Lab1C

Pseudocode of Project 2: Phase I

```
*/
```

Access text file

Prompt user for a word

Save that word into a string variable called inputWord

Compare the first word of each row to the inputWord until there is a match

Use getline (string) to grab the whole line where inputWord matches the word in the first row

Using the helper method splitOnSpace(), separate the first word from the line

Output (cout) from passing the entire line to splitOnSpace()
